

ACTIVE SOFT

Water Hardness Treatment System

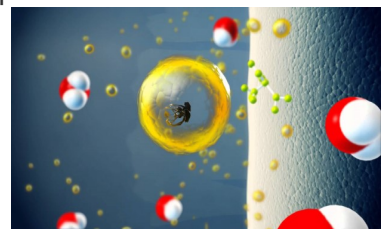

Model: **XC8000-S**

Hard water is a common problem in many homes and businesses. It contains high levels of minerals like calcium, which can form scale — the white, chalky buildup that clogs pipes, damages appliances, and reduces efficiency.

The Active Soft XC8000-S conditions the water rather than removing minerals. It changes how minerals behave in water, keeping them dissolved so they don't easy to stick on surfaces or form damaging scale.

Active Soft XC8000-S utilizes advanced technology to reduce scale buildup through the proven scientific process of chelation. Unlike traditional salt-based softeners that remove calcium from water, Active Soft binds and isolates calcium ions, preventing them from precipitating and forming scale. Once bonded to Citrus-Charge, the chelating agent, these minerals remain dissolved and are far less likely to create scale deposits.

Dimension: 450mm (H) x 90 mm (Dia)
Max Temp: 38°C
Max Pressure: 800kPa
Inlet/Outlet Ports: 20mm (3/4 inch)
Replacement Interval: 4 - 6 months
