

## M2043 HOUSING SYSTEM

**Tw-M2043** is designed for refrigerators with ice-makers and/or water through the fridge door. The water filter system is capable of high volume water filtrations which makes it an ideal system if clean water is required. Such uses can be with beverage equipment, drinking fountains, ice machines and similar food grade appliances.

The combination of sediment and carbon filter cartridges will provide clearer and better tasting water and ice.

### Filtering Process

#### Stage 1 - Sediment **5 Micron** Polyspun Pre Filter

The 5-micron sediment filter cartridge reduces extra-fine dirt, sand, sediment, silt, rust particles and asbestos particles.

#### Stage 2 - Carbon Block or Granular Active Carbon

The Standard 20"X 2.5" 5-Micron Carbon Block Filter simultaneously removes chlorine and organic chemicals, both of which contributes to water taste and odour. The particulate filtration and dirt-holding capacity is provided by its efficient 5µm nominal sediment filter.

Our Carbon Block filter delivers an extended life while removing sediment, chlorine taste and odour, and organic contaminants from water, aqueous solutions or suspensions.

### Features;

- **Dimensions:** 22" x 3"
- **Maximum Temperature:** 100°F (37.8°C)
- **Maximum Pressure:** 90 psi (6.2 bar)
- Polypropylene food grade plastic
