

XZ937 / XZ938 SERIES FILTERS

Sediment, Scale, Taste and Odour Reduction

XZ93x series filters are a 5 micron scale inhibitor water filter cartridge designed to address these problems. Perfect for use in commercial applications or home with kitchen equipment and coffee and ice machines to prevent scale build up and damage to your machines. It reduces chlorine, taste, odour, sediment and scale control.

For applications in which water is heated past its boiling point, it is usually advised to employ one, if not many scale reduction techniques in water filtration to safeguard against scale build-up in water boilers. Such build-up can lead to machinery damage, and if left unattended, failure.

Specification

Flow Rate: 7.5 L/min
 Micron Rate: 5
 Capacity: ~13,000 litre
 Max. Temperature: 38°C
 Min. Pressure: 172 kPa
 Max. Pressure: 860 kPa (non-shock)

Certified to Australian Watermark Standard. Simplified the standard and confusion by just having one standard filter to suit different models.

Model	Compatible List
XZ937	93701 93702 93703
XZ938	93704 93705

Filter Replacement Instructions

1. Shut off the water supply
2. Release the water pressure by turning on the tap
3. Grasp existing filter and remove by rotating left until it stops, then pull down releasing it from the filter head
4. Align replacement filter guide channels with the corresponding posts of the filter head
5. Insert the filter upward until it fully seats into the head, then rotate right until it stops
6. Flush the system for 5 minutes before use

X-Revo

The first company to introduce water filter recycling program. Our water filter plastic are made from highest food grade quality plastic. Hence is make sense to recycle them instead of sending them to landfill.

Our X-Revo recycling program entail.

1. Remove the used media from the housing
2. Send them to recycling factory for remake to other useful products.

Please send the used filter back to us for recycle
